

A. Different answer, stiffer structure

14 of 100 cells differ from the reference answer, on identical material.

The completion carries the load through a uniform section rather than a tapered one, which is stiffer for the same volume: it beats both the dataset answer and the optimizer's own design, so its score saturates.

compliance 5.34
material 27%

B. Almost identical answer, no structure at all

1 of 100 cells differs from the reference answer - the one cell that was masked - and it cuts the only path from the load to the supports.

Gemini 1.5 Pro on full_easy: 86% of cells match the answer | 1.53x the stiffness of the answer | topology score 1.00

Perplexity Sonar on 1_random_cell_easy: 99% of cells match the answer | carries no load | topology score 0.00
