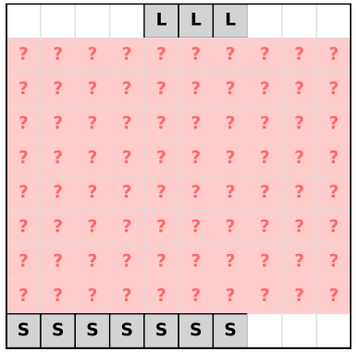
Load / Support  Material  Empty  Masked  Differs from answer

## A. Different answer, stiffer structure

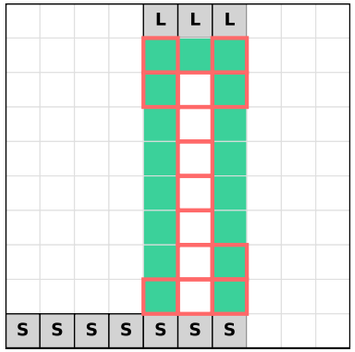
14 of 100 cells differ from the reference answer, on identical material.
The completion carries the load through a uniform section rather than a tapered one, which is stiffer for the same volume: it beats both the dataset answer and the optimizer's own design, so its score saturates.

**Prompt**



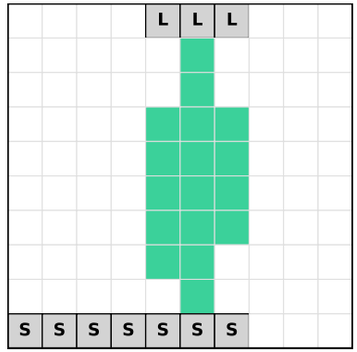
80 masked cells

**Gemini 1.5 Pro completion**



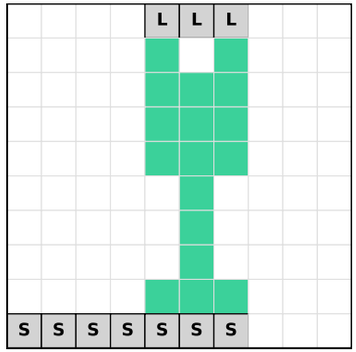
compliance 3.96
material 27%

**Dataset answer**



compliance 6.07
material 27%

**SIMP reference, same budget**

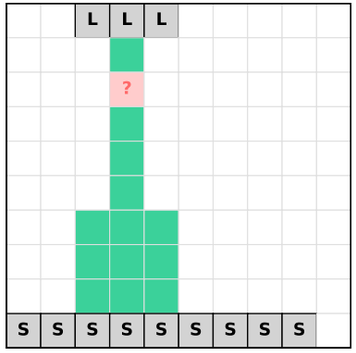


compliance 5.34
material 27%

## B. Almost identical answer, no structure at all

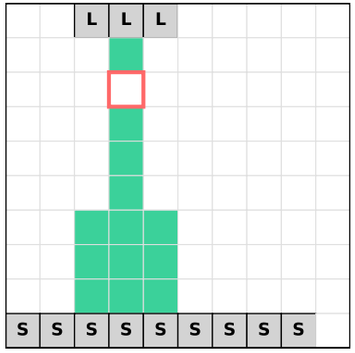
1 of 100 cells differs from the reference answer - the one cell that was masked - and it cuts the only path from the load to the supports.

**Prompt**



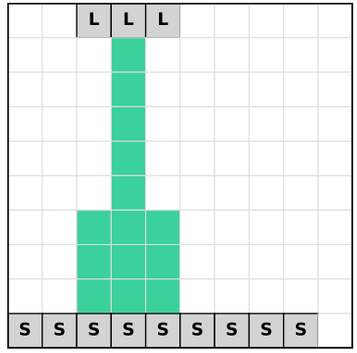
1 masked cell

**Perplexity Sonar completion**



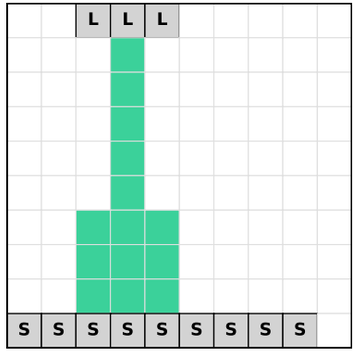
load path severed
material 25%

**Dataset answer**



compliance 6.71
material 26%

**SIMP reference, same budget**



compliance 6.71
material 26%

Gemini 1.5 Pro on full_easy: 86% of cells match the answer | 1.53x the stiffness of the answer | topology score 1.00

Perplexity Sonar on 1_random_cell_easy: 99% of cells match the answer | carries no load | topology score 0.00
